

How to mount LED signboard to the wall using L-brackets

1. Using the included L-brackets (4 pcs) and self-drilling screws, secure the LED sign to the wall in four locations.
2. The LED sign frame is made of double-walled tubing (40mm thick), making it safe to use self-drilling screws.
3. When securing the L-bracket to the top of the frame, apply a generous amount of silicone to the screw connection points to prevent rainwater from seeping in.

bracket : 40x40mm
screw : 15mm(L)
